## Amendments to the Specification:

Please replace the third paragraph of page 13 with the following substitute paragraph:

Various embodiments of the present invention inhibit carbamylation of the peptide/protein to varying degrees. In an embodiment, the carbamylation percent protection is about 100% after three weeks. In another embodiment, the compound inhibits carbamylation of ribonuclease A to a greater extent that does 1,2-ethylene diamine inhibit the carbamylation of ribonuclease A. Preferred compounds for comparison comprise a compound selected from the group consisting of histidine, 4-hydroxyl praline proline, and Gly-Gly.
